Art Unit: 1652

Claims 4-56 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made without traverse in the reply filed on 12/21/05.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ardelt, et al. (A) in view of Lehninger. (U) and further in view of Studier, et al. (V), Huang, et al. (W) and Gerrero, et al. (X). This rejection is repeated for the reasons given in the last action. Applicants arguments have been carefully considered but do not overcome the instant rejection.

Applicant argues that "without a starting point such as is contained in applicant's disclosure, construction of a DNA molecule that would in fact encode the SEQ ID NO:1 protein would require undue experimentation [and that] {t}he prior art contains nothing indicating the number of oligonucleotides to be used, or the length of each, or the length of the overhang between complimentary oligonucleotides after annealing, or the number of mismatches between unfitting oligonucleotides, etc." This argument is not agreed with. The instant claims do not require that the vector produce the protein of SEQ ID NO:1 but simply it contain a DNA encoding it. As stated previously, Ardelt, et al. teach that SEQ ID NO:1 is the sequence of an RNase but do not teach

3-4 TT-14 1650

Art Unit: 1652

the nucleotide sequence that encodes it. One of ordinary skill in the art could use the sequence given by Ardelt, et al. along with the "codon dictionary" given by Lehninger to make any number of nucleotides that encode SEQ ID NO:1. One of ordinary skill in the art could synthesize a nucleotide of this full length or synthesize oligonucleotides and anneal them together and then check that the annealed sequence encoded SEQ ID NO:1. Whether they would produce SEQ ID NO:2 in any appreciable amount in a particular organism or from a particular vector is another point that is not claimed in the instant claims. Even if the instant claims did claim production of the protein from a particular vector, the production of any protein by the vector, regardless of how small an amount, would meet the requirements of the claims.

Claim 57 is allowed.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Charles L. Patterson, Jr., PhD, whose telephone number is 571-272-0936. The examiner can normally be reached on Monday - Friday from 7:30 to 4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ponnathapura Achutamurthy, can be reached on 571-272-0928. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
